SUMMARY

MERN Stack Developer specializing in TypeScript-driven full-stack development using MongoDB, Express.js, React.js, and Node.js. Skilled in secure, scalable systems with Zod validation, type-safe architecture, optimized database operations, and production-grade API design. Strong in asynchronous workflows, authentication, performance optimization, and maintainable software design.

SKILLS

Languages: JavaScript (ES6+), TypeScript, Java (basic)

Frontend: React.js, Redux Toolkit, Tailwind CSS, State Management, API Integration, Responsive & Component-Based UI Development

Backend: Node.js, Express.js, REST API Design, Scalable API Architecture, Microservices Architecture, Async Processing

Databases & Storage: MongoDB (Aggregation, Indexing, Schema Design), Redis (Caching, Cache Invalidation, Session Store)

Validation, Auth & Security: Zod, Schema Validation, JWT, Session Auth, RBAC, Bcrypt, API Security

Messaging & System Design: RabbitMQ (Queues, Workers, Retry Mechanisms), Event-Driven Architecture, Concurrency Handling, Idempotency

Performance & Scalability: Caching Strategies, Rate Limiting, Database Optimization, Performance Optimization, Fault-Tolerant System Design

DevOps & Tools: Git, GitHub, Docker (Containerization), CI/CD (Basic), Postman, Cloudinary, Vercel, Railway

EXPERIENCE

Frontend Developer Intern | Web Freak Development | April 2025 – November 2025 (8 Months)

Live Demo: <https://www.servicespanda.com/>

Source Code: <https://github.com/aryanxengineer/services-panda-intern-project>

- Contributed to development of production-grade **MERN-based web applications** including **Main Platform, Admin Panel, and User Dashboard**, building scalable frontend modules with **React.js, Redux Toolkit, TypeScript, and Tailwind CSS** using reusable and maintainable component architecture.
- Integrated **RESTful APIs** and implemented secure **role-based workflows**, protected routes, dynamic rendering, **authentication flows**, validation handling, and seamless **frontend-backend integration**.
- Managed complex client-side state, asynchronous API handling, dashboard data flows, and state-driven UI logic using **Redux Toolkit** and modern **React** patterns for scalable application behavior.
- Improved application responsiveness, rendering performance, **UI consistency**, and supported **production deployment workflows**, build optimization, hosting updates, and live application releases.

PROJECTS

Social Media Platform | <https://edvora-social.vercel.app/>

Source Code: <https://github.com/aryanxengineer/edvora-social>

- Built a production-grade social media platform using **React.js, TypeScript, Node.js, Express.js, MongoDB, and Redis** with scalable full-stack architecture and type-safe development practices.
- Engineered secure **session-based authentication, RESTful APIs**, and backend modules for users, profiles, posts, likes, comments, follows, feeds, and search using **Zod validation**, reusable utilities, and modern backend best practices.
- Implemented advanced backend concepts including **database transactions, MongoDB indexing, idempotent workflows, rate limiting, CORS, Helmet**, and structured logging with **Winston** to improve reliability, security, and performance.
- Developed responsive and interactive frontend experiences using **React, Redux Toolkit, Tailwind CSS, ShadCN UI**, typed **Axios** integration, and efficient state management patterns.
- Integrated real-time capabilities with **Socket.IO** and optimized system throughput using **Redis caching**, asynchronous workflows, and maintainable **TypeScript-driven** application architecture.

Food Delivery System

Source Code: <https://github.com/aryanxengineer/food-delivery-system>

- Built a **Zomato-like microservices backend system** using **Node.js, Express, TypeScript, MongoDB, and Mongoose** with independently deployed services: **Auth, Admin, Restaurant, Rider, Realtime, and Utils**.
- Designed **event-driven inter-service communication** using **RabbitMQ (amqp-lib)** for asynchronous workflows such as **order processing, rider assignment, and service coordination**.
- Implemented **secure authentication & authorization architecture** using **JWT, Google OAuth, role-based access control (RBAC)**, and protected APIs across multiple services.
- Developed **real-time delivery/order tracking features** using **Socket.IO**, enabling live status updates between customers, restaurants, and riders.
- Integrated production-style backend capabilities including **payment gateway (Razorpay), media/file handling (Multer, Cloudinary)**, API communication via **Axios**, and centralized utility services for scalable backend operations.

EDUCATION

Bachelor of Computer Applications (BCA)

Dr. Virendra Swaroop Institute of Computer Studies, 2023-2026

CGPA: 7.65
